

# WATER CONSERVATION WITHOUT SACRIFICING PERFORMANCE

Conserving water is the responsibility of everyone and there are some very efficient ways that all of us can contribute to guard against the wasteful use of one

of our most vital resources, water. The EPA  program provides guidelines to efficiently and effectively conserve water. All products

with the  label have been independently certified by the EPA for efficiency and performance.

Moen , a leader in the plumbing fixture industry, now has a line of Eco-Performance products in all of its product lines with the  label.

In this product line Moen has twelve  that meet this criteria.

These  have a flow rate of 1.75 or 2.0 gallons per minute and can use up to 30-40% less water than the industry standard of 2.5 gallons per minute.

Various finishes for the  are available so they can match any existing bathroom fixtures.

Please go to our Facebook page at [www.facebook.com/AaronKramerPlumbing](http://www.facebook.com/AaronKramerPlumbing)

to view more of  shower heads in the Eco-Performance line that meet

the  criteria. While visiting our page, please ‘like’ us. You may also call Aaron Kramer Plumbing for further information on any other Moen products or for any of your plumbing needs.
